

Did you miss our webinar on the CyberSecure Canada Program? You can download it now

In early September, TECHNATION provided Health members with the opportunity to attend a complimentary webinar organized with Canadian Centre for Cyber Security. **Erle Higgins**, the Technical Manager of the Cyber Center's **CyberSecure Canada program** and a professional engineer at the department of Innovation Science and Economic Development Canada, addressed: the importance of adopting cyber security practices; the impacts of weak cyber security posture; and provided an overview of the security controls required for certification and explain the certification process

This webinar tied in closely with TECHNATION Health's Advocacy Committee **Privacy and Security Framework** that includes recommendations related to cyber security and standards. The recent privacy breaches and ransomware attacks have demonstrated how vulnerable our digital health systems are to compromise. Health data and systems are valuable assets that are targeted by malicious agents for financial gain or other advantage. Healthcare organizations and the technology companies that support them must be vigilant in ensuring that the appropriate privacy and security controls are in place.

The webinar is now available for viewing for those who were unable to participate, please contact Janet Tite at jtite@technationcanada.ca.

About the Canadian Centre for Cyber Security

The Canadian Centre for Cyber Security (Cyber Centre) is Canada's authority on cyber security, uniting existing operational cyber security expertise from Public Safety Canada, Shared Services Canada, and the Communications Security Establishment in to one high-functioning, responsive organization. The Cyber Centre is the single unified source of expert advice, guidance, services and support on cyber security for government, critical infrastructure owners and operations, the private sector and the Canadian public.
