Municipality Cybersecurity Best Practices event to be held November 20

Register today. TECHNATION will host its next ***Municipality Cybersecurity Best Practices Event*** on November 20, 2020.

This will follow a similar format to our Cybersecurity Best Practices Event for small and medium-sized enterprises (SME) leaders this past June. This event will include initial context-setting presentations and three break-out sessions for:

- Threat and risk assessment
- Planning and governance
- Incident management

The break-out sessions will feature expert facilitators who will be expected to craft an initial discussion around best practices for municipalities for their topic area and then get municipal leader perspectives on what would work and what would across their contexts.

Upon completion, you will be provided with the best practices from all three sessions to help guide your cybersecurity decisions and help improve your organizational cyber resilience.
